

Alorair SLGR technology

Alorair SLGR microchannel technology has improved the performance and efficiency, uses a special air-to-air heat exchanger system to help bring the air closer to dew point temperature before it passes over the super-cooled evaporator coils, besides with the combination of Microchannel Alu Condenser, Maximize the Capacity and efficiency, increased by 30 ~ 50%. This leads to more condensation that forms on the coils inside the machine, and fastest for interchange of heat, which in turn leads to more moisture pumped out and less moisture in the air that is returned to the room. This extra efficiency makes ALORAIR SLGR dehumidifier perfectly suited for Low grain Refrigeration conditions.
